

## StyleTech Solutions Limited announce new StyleTech Mental Health Clustering Tool software website launch

[www.mentalhealthclusteringtool.co.uk](http://www.mentalhealthclusteringtool.co.uk) is now Live!

StyleTech Solutions Limited has developed the StyleTech Mental Health Clustering Tool data entry and reporting solution that has been proven within the CPPP Yorkshire trial region.

The launch of the new StyleTech Mental Health Clustering Tool software website will enable Mental Health Trusts to identify further opportunity to develop efficiency and meet all national Department of Health guidelines in relation to the (PbR) Payment by Results for Mental Health previously known as (HoNUS PbR).

StyleTech is also pleased to announce the signing of commercial agreements with Humber Mental Health Foundation Trust (the initial commissioning organisation) and the Care Pathways and Packages Project team (CPPP). CPPP is a consortium of organisations in the Yorkshire & Humber and North East SHA areas who are working together to develop National Currencies and Local Tariffs for Mental Health Payment by Results.

The commercial agreement enables the StyleTech Mental Health Clustering Tool software to be offered to every relevant NHS Trust in England in a choice of three packaged solutions.

StyleTech has been involved with the development of Mental Health Assessment programmes since the early stages of SARN in 2008 (the predecessor to the MHCT).

"StyleTech played a significant part in CPPP delivering validated clusters within a very challenging timeframe."

***CPPP Programme Director***

“The launch of the new StyleTech Mental Health Clustering Tool website adds to the growing portfolio of software applications developed and marketed by StyleTech Solutions.

The new website will enable Mental Health Trusts to identify further opportunity to develop efficiency and meet all national Department of Health guidelines in relation to the (PbR) Payment by Results for Mental Health.

StyleTech Solutions working in association with NHS Trusts, GP consortia and other medical organisations consistently seek methods of introducing efficiency and cost savings through the use of tried, tested and proven software applications.

National NHS agendas and commissioning best practices have a keen focus on the re-application of proven software solutions and StyleTech are now able to provide the Mental Health Clustering Tool software as a secure, robust and proven solution in a choice of three packages.

Working in this way also supports the StyleTech value added service approach whilst providing NHS Trusts with the opportunity to utilise existing proven software.”
